Education

Ph.D. Civil Engineering (Grade 90%)

University of Saskatchewan, Saskatoon, SK, Canada

2023

M.Sc. Civil Engineering (Grade 87%)

University of Saskatchewan, Saskatoon, SK, Canada

2014

B.Eng. Materials Science and Engineering (Grade 89%)

Chongqing University, Chongqing City, China

2008

Professional Associations

P.Eng. Association of Professional Engineers and Geoscientists of Saskatchewan (APEGS).

Teaching Experience

Sessional Lecturer

Department of Chemical & Biological Engineering, U of S

- CHE 453 Corrosion Engineering

Department of Civil, Geological and Environmental Engineering, U of S

- CE 212 Civil Engineering Materials

Department of Computer Science, U of S

- CMPT 141 Introduction to Computer Science

St. Peter's College, U of S

- CMPT 142 Introduction to Computer Science for Engineers

Sep, 2019 – Dec, 2019 & Sep, 2022 – Present

Saskatoon, SK, Canada

Muenster, SK, Canada

Teaching Assistant

University of Saskatchewan

- Material testing lab - CE 212 Civil Engineering Materials
- Problem solving lab - CE 318 Applied Engineering Mathematics
- Structural analysis software tutorial lab - CE 463 Advanced Structural Analysis

2009 – 2014 (various terms)

Saskatoon, SK, Canada

Professional Experience

Mitacs Accelerate R&D Engineer

Partnership: City of Saskatoon

- Project title: Effective concrete mixes for Saskatchewan sidewalks using locally available pop-out prone aggregates

I am developing cost-effective remedial strategies for reducing, and possibly eliminating, pop-out damage to concrete sidewalks, as well as other potential forms of damage caused by freeze and thaw cycles and ASR.

Oct, 2022 – Present

Saskatoon, SK, Canada

Mitacs Accelerate R&D Engineer

Partnership: ZACARUK consulting Inc

- Project title: A non-destructive approach for assessing the integrity and performance of waterproofing membranes in bridge decks

I developed a non-destructive method for assessing the integrity of waterproofing systems in reinforced concrete bridge decks. The proposed technique is used to assess the quality of a newly installed membrane system, or to determine whether the membrane is deteriorating during its service life.

Sep, 2021 – Apr, 2022

Regina, SK, Canada

Mitacs Accelerate R&D Engineer

Partnership: ZACARUK consulting Inc

Sep, 2020 – Apr, 2021

Regina, SK, Canada

- Project title: A rational data-driven probabilistic approach for assessing the condition and performance of RC structures
- Industrial application:
 - Assessment of Moose Jaw Inland Grain Terminal
 - Assessment of Petrofka Bridge

I developed a practical life-cycle deterioration model software that uses measured field data to predict the service condition of existing reinforced concrete structures and to identify novel sensor technology that can be implemented to provide critical field data. I used the software to provide probabilistic results at each deterioration stage of a reinforced concrete structure that can be used to schedule maintenance or repair strategies to extend the life of the asset.

Consultant in contract

ZACARUK consulting Inc

Aug, 2019 – Dec, 2019

Moose Jaw, SK, Canada

- Moose jaw grain station project

I designed the moisture monitoring system for concrete silos and provided personnel training for the installation and operation of the system. I assessed the corrosion condition of the grain station with the field moisture content data.

Research Engineer (full-time & part-time)

University of Saskatchewan, City of Saskatoon

May, 2014 – Sep, 2015 & Sep, 2015 - Apr, 2018

Saskatoon, SK, Canada

- Bridge arch repair and life-cycle cost assessment project

I developed and installed the onsite corrosion monitoring devices for a reinforced concrete arch bridge to monitor the corrosion affecting factors such as moisture content, electrical conductivity, and oxygen content. I extracted and characterized the concrete pore solution composition for the electrochemical testing of the rebar corrosion behaviour. I developed a large-scale transport model to simulate the corrosion environment due to different exposure conditions and climate change. I assessed various rehabilitation strategies and provided recommendations for an effective rehabilitation strategy and timeline to optimize the life-cycle cost.

I led the test panel validation program, oversaw the test panel construction, facilitated the collaboration between the construction companies on multiple rehab treatments, and reported to stakeholders.

Programming experience

Python

Skilled in data science (Pandas, Matplotlib), machine learning (Scikit-Learn, TensorFlow), and advanced computational techniques (probabilistic and numerical modeling). Experienced in object-oriented programming.

COMSOL Multiphysics, MATLAB

Expertise in modeling reactive chemical transport in porous media, electrochemistry, and material mechanics. Proficient in large-scale simulations on high-performance computing clusters.

Patent

A non-destructive testing technique to assess the integrity of bridge deck membranes, in the application process as the inventor.

Certificate and Awards

Certificate in University Teaching and Learning	University of Saskatchewan
Recommended to PhD Thesis Awards/Governor General's Gold Medal Competition	University of Saskatchewan
Certificate of Project Management	Mitacs
Certificate of Applied Machine Learning in Python	University of Michigan (via Coursera)
Certificate of Contribution to the NACE Calgary Sector	National Association of Corrosion Engineers
Saskatchewan Innovation and Opportunity Scholarship	Government of Saskatchewan

Presentations

Presentation to Ministry of Highways and Infrastructure (Web conference) Deterioration of structures: testing and rehabilitation	Jul 30, 2020
Presentation, NACE Northern Area Western Conference (Regina Canada) Homogenized corrosion parameters of rebars in concrete	Feb 6, 2020
Open Lecture, Saskatoon Engineering Society (Saskatoon Canada)	Nov 29, 2019

Corrosion Arch Rehab for the Univ Bridge —"provide healthcare to infrastructures"

Presentation, NACE Northern Area Western Conference (Calgary Canada) Feb 7, 2019
Corrosion Prediction with 3D Model Utilizing Meteorological Data and Properties of Site-extracted Rebar and Concrete

Guest Speaker, NACE Calgary luncheon technical session Jan 25, 2019
Topic: Computer-aided Assessment of Arch Rehabilitation Strategies for the University Bridge (30 mins)

Interview, Global News Jan 8, 2019
Topic: "Calcium chloride and its corrosive effects on concrete and asphalt"

Live Interview, Ryan Jespersen Show, 630CHED radio Aug 22, 2018
Podcast: Jespersen - 11 - Corrosion & the maintenance needs of civic structures (Duration 20:40)
